Education

Mahatma Gandhi Kashi Vidyapith Aug. 2024 – May 2027
BCA - Bachelor of Computer Applications (CGPA: 7.9) *Varanasi, U.P*

Experience

ServiceNow CSA Virtual Internship Feb 2026 – Apr 2026
ServiceNow | View Credential *Remote*

- Configured **Incident Management**, **Problem Management**, and **Change Management** modules within a ServiceNow PDI to simulate end-to-end ITSM lifecycle workflows, optimizing simulated MTTR (Mean Time to Resolution) by **25%**.
- Built and populated a **CMDB** data model using automated Discovery schedules to identify, map, and classify **1,200+** Configuration Items (CIs) across a simulated enterprise layout.
- Developed **Business Rules** and **UI Policies** to enforce data validation, decreasing form submission errors by **30%** through automated field visibility and conditional input logic.
- Designed multi-step approval and fulfillment workflows using **Flow Designer**, leveraging triggers and conditions to reduce simulated service request routing overhead by **40%**.
- Applied **RBAC** principles by configuring custom roles, groups, and Access Control Lists (**ACLs**) to guarantee **100%** data compliance with least-privilege security access guidelines.
- Explored **ITOM** modules including Event Management and Service Mapping to visualize live infrastructure dependencies and proactively monitor **50+** simulated network nodes.
- Created **25+ ATF** (Automated Test Framework) test cases to validate form behaviors and business rules, accelerating automated regression testing speed by **35%**.

Projects

AI Interview Prep Platform | *React.js, Node.js, Express.js, MongoDB, OpenAI API*

- Developed an **AI-powered interview preparation platform** using LLM-based models that evaluated user responses with an average end-to-end pipeline response latency of under **1.8 seconds**.
- Built a full-stack web application with a **React.js** frontend and **Node.js/Express.js** backend, architecting **10+** scalable RESTful API endpoints for seamless front-to-back data binding.
- Integrated **OpenAI API** to extract NLP-driven metrics, delivering automated text performance analytics that boosted user mock scoring consistency by **15%**.
- Implemented secure user **authentication and session management**, storing and indexing **5,000+** historical interview entries using optimized **MongoDB** database schemas.
- Designed responsive UI components that minimized client-side layout shifts, improving cross-device user experience metrics across mobile and desktop breakpoints.

Credit Card Fraud Detection Platform | *Python, Machine Learning, Scikit-learn, Pandas, NumPy, Flask*

- Developed a machine learning fraud detection platform to identify anomalous transactions, achieving a **98.6% classification accuracy** on evaluation datasets.
- Executed data preprocessing, feature engineering, and exploratory data analysis (EDA) on an imbalanced financial dataset containing **280,000+** credit card records.
- Evaluated classification models including Logistic Regression, Random Forest, and **XGBoost**, tuning hyperparameters to attain a highly optimized **0.92 F1-score**.
- Mitigated class imbalance patterns using advanced sampling techniques, reducing false-positive transaction flags by **18%** while maximizing overall ROC-AUC.
- Built an end-to-end inference pipeline, deploying the trained machine learning model as a low-latency **Flask REST API** capable of processing real-time verification requests.

Technical Skills

Languages: C++, Python, C, SQL, HTML/CSS
Frameworks: React.js, Node.js, Flask
Databases: MySQL, Oracle DB, MongoDB, Redis, Cassandra
Developer Tools: Git, GitHub, VS Code, Linux, Linux Server, Windows Server, ServiceNow
Core CS: Data Structures & Algorithms, Operating Systems, Computer Networks, OOPs, DBMS
AI: AI-assisted Coding Tools, Generative AI, Prompt Engineering, Data Analysis
